## **MC Squared Energy Services Net Metering Program**

An active or pending MC Squared customer can qualify for net metering if they own or operate an eligible renewable electric generator that is located on their premise, intended primarily to offset their own electrical requirements.

Eligible renewable electrical generating facilities include generators with a total rated capacity of not more than 2,000 kilowatts powered by solar electric energy, wind, dedicated crops grown for electricity generation, agricultural residues, untreated and unadulterated wood waste, landscape trimmings, livestock manure, anaerobic digestion of livestock or food processing waste, fuel cells or micro-turbines powered by renewable fuels, or hydroelectric energy.

MC Squared Energy Services encourages customers to work closely with their system installers through the ComEd Interconnection Application approval process. The interconnection application should be submitted and approved by ComEd prior to the start of your distributed generation installation's construction. For additional questions, email ComEd at [Interconnect@ComEd.com](mailto:Interconnect@ComEd.com).

The MC Squared net metering application request is submitted after the interconnection application has been submitted. You will not be able to participate in the MC Squared net metering program until ComEd has approved the interconnection application.

If you have additional questions or would like to apply to the MC Squared Energy Services Net Metering program, email MC Squared at [info@mc2energyservices.com](mailto:info@mc2energyservices.com). Include the following information in your email:

ComEd account number:

ComEd Interconnection approval date:

Renewable electrical generating type:
